

ExpressCloud:

Enterprise Cloud an Optimized Journey

Take away points

Enterprise Applications moved to cloud by optimizing the Hybrid, Public and Private cloud.

Improved SLA, including Security.

Ebizoncloud SLA supported optimized cloud platform.

EXPRESSCLOUD, PROPOSALS FOR ORACLE APPLICATIONS AND WORKLOADS ON CLOUD TRANSFORMATIONS

With Reduce costs, greater agility and higher service levels by migrating your enterprise applications, development, test environments to a Ebizoncloud - Architected Hybrid, Public & Private cloud platform, supported by proven designs and SLAs.

KEY BENEFITS

Cloud architecture design, based on proven public and private reference architectures	Deployment of applications with related integrations	License optimization for assured compliance in the cloud	Fully supported cloud platform, backed by Ebizoncloud SLA
Automated provisioning and configuration of virtual data centers, along with IaaS and PaaS elements	Fast, fault-tolerant migrations, able to handle large data sets	Performance optimization to ensure the best user experience and to avoid high cloud resource-consumption	Optimized managed services for 24x7 real-time monitoring and proactive maintenance

INTRODUCTION:
Moving your Oracle on-premises applications or environment to modern cloud platform, like Public, Private or Hybrid, benefits cost savings, performance improvement, High availability, Disaster Recovery, Agility and Security.

CHALLENGES:
Common challenges of enterprise cloud transformation: Cloud transformation skills, methodologies and Designing, and selecting right cloud transformation partner.
You also need the confidence that your transformation will deliver real value at the end, by empowering your organization to innovate and ultimately set itself apart from everyone else.

SOLUTION:
We have ExpressCloud, a proven approach end to end, many have benefited with migrations with established proposals, process, methodology also to maintain framework to look at cloud and applications.

Deliver upfront capex cost and deliver cloud economics for entire journey of transformation on going managed services.

Eliminates the Risk of traditional cloud transformation.

- EXPRESSCLOUD OPTIMIZES BY:**
- The architecture design and delivery of your cloud platform
 - The user experience of applications running on your new platform
 - The commercials, to ensure you're getting maximum value from your investments
 - The public-cloud-readiness of any private cloud elements
 - The maintenance of the platform, to free your teams from low-level tasks

- EXPRESSCLOUD USE CASES:**
- ExpressCloud can be used to move any enterprise application to a public, private or hybrid cloud platform. This can include:
- Oracle applications, including E-Business Suite, Fusion Middleware, People-Soft, JD Edwards.
 - Oracle-based independent software vendor (ISV) applications
 - Non-Oracle applications running on Oracle, such as Salesforce applications
 - Oracle Database workloads
 - Development and test environments
 - Disaster recovery environments

ExpressCloud: Enterprise cloud an Optimized Journey

Strategy → Discover → Design → Build → Deploy → Migrate → Optimize → Manage

SUPPORTED BY SERVICE LEVEL AGREEMENT

- Supported by service level agreement
Businesses demand a robust service level agreement (SLA), so you are confident your optimized private or public cloud platform will deliver.
- If you use our ExpressCloud program and ongoing managed services, we will provide you with a contractual SLA, covering the availability of the platform. This will give you the confidence you need to move to the cloud, knowing you can deliver levels of service to your customers that are the same as or better than what you do now.

CONTROL WHERE YOUR DATA IS STORED

We will architect a platform that meets your data sovereignty requirements.

HOW EXPRESS IS EXPRESSCLOUD?

ExpressCloud discovery and design phases take:

- 1 week for small environments
- 2 weeks for medium environments
- 4 weeks for large environments

The speed of ExpressCloud's subsequent automated build, migration and production-readiness phases will depend on the size and complexity of your environment.

As an example, using ExpressCloud to move Oracle E-Business Suite to the Oracle public cloud typically takes:

- 30 days to deliver your design
- 60 days for a test environment
- 90 days to deliver production

YOUR EXPRESSCLOUD TRANSFORMATION: HOW IT WORKS

STRATEGY

To ensure your transformation aligns with your organizational vision, we will understand your broader objectives and set out a strategy to help deliver them.

DISCOVER

We run an express discovery and assessment of your existing environment(s), to make sure we've captured all the components. This ensures we design a complete solution that includes higher service levels and security.

DEPLOY

We collaborate with your application team to fully understand, automate and deploy your application stack, including all related integrations.

MIGRATE

We use powerful, highly fault-tolerant migration tools, with built-in data compression, to move data to your new cloud platform more quickly and with less risk than traditional techniques.

And because ExpressCloud also includes database-cloning technology, we can save you time, network bandwidth and cloud storage resources by only copying your data to the cloud platform once. Once it's there, the same copy can be used to establish any number of non-production, cloned environments, resulting in significant savings in the cloud.

DESIGN

Our powerful, automated design process quickly architects and accurately prices the right public, private or hybrid cloud environment for your use case. It uses our proven reference architectures for different types and sizes of deployment. This can include our High Availability Plus Architecture Plus (HA+), which exceeds even Oracle's own MAA.

BUILD

Our automated build processes take the outputs from the Design phase to rapidly and accurately provision, build and configure your cloud virtual data center and the cloud infrastructure required to support your application.

OPTIMIZE

As part of your cloud transformation, we focus on optimizing the performance of your application in the cloud, using the powerful Method R approach.

We will also optimize your Oracle licensing, to explore potential savings and ensure compliance.

And if you're an application provider (independent software vendor), we can also provide options to move to a new, simpler commercial model with Oracle.

MANAGE

We work with you as a true partner, offering services and support agreements that demonstrate our willingness to share risk. Our highly experienced global managed services teams will monitor and manage your cloud platform 24x7. We will proactively maintain it, to provide a predictable support experience based on preventative maintenance and fast-response reactive support.

All of this gives you the peace of mind to get on with your core business, knowing your critical enterprise platform won't let you down.
